

X·PLATING

Innovation: modus operandi

Founded in 2008 for clients who needed tighter delivery-times than the industry standard offered.

X-PLATING is the first and only company to simultaneously supply galvanic treatments, X22 finishes and coatings in an exclusively single and integrated process.

X-PLATING's entire production is currently carried out through a static galvanic plant which provides nickel and non-nickel finishing.

A development project was initiated last year involving two new structural technologies for physical vapour deposition applications.

During 2020, X-PLATING acquired a new establishment of approximately 1000 sq. m to enlarge its production facilities.

- 
- **WOMEN MAKE UP 50% OF THE WORKFORCE**
 - **AVERAGE AGE OF 38 YEARS**
 - **STAFF UNDER 35 YEARS OF AGE: 45%**
 - **NON-CONFORMITY QUALITY: 0.8%**
 - **OVER 60.000 ITEMS/MONTH**
 - **ON-TIME DELIVERY: 87%**
 - **TURNOVER 40%+ OVER (2018-2019)**

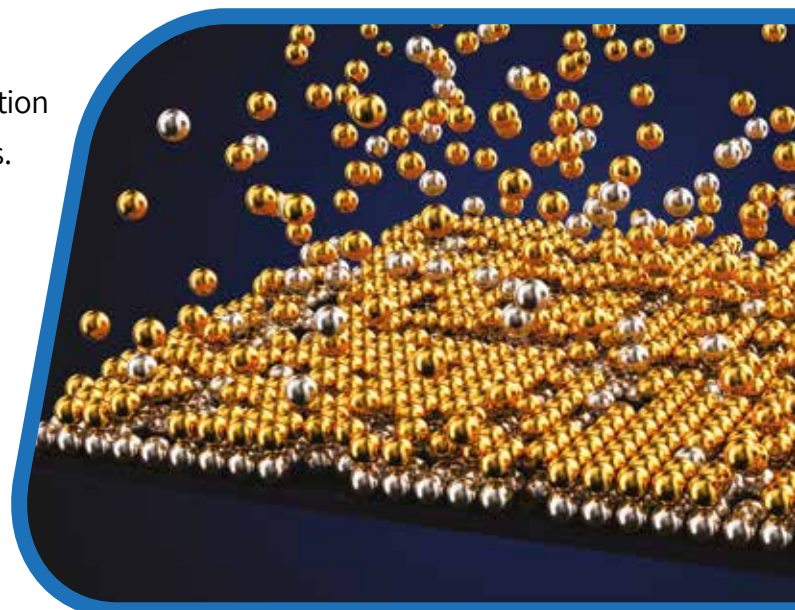

X) (LAB SPAXIO) (22

An area dedicated to research, innovation and experimentation, as well as a specialised production laboratory, where technicians and operators test and create all possible types of solutions.

The intention behind affording these specialised activities stems from the continuous growth and diversification of the market, and the need to develop technologies and techniques to ensure all variations and customisations can be achieved.

X-PLATING is yet another flagship in LEM INDUSTRIES Group of companies, and perfectly embodies the future ideal, innovation and sustainability, aspects which have long since distinguished this Group in the marketplace.

PVD Technology System

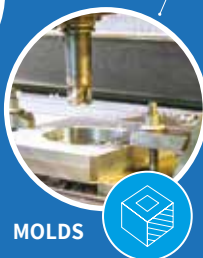

PHYSICAL VAPOUR DEPOSITION (PVD) is a family of technologies which produces thin films and coatings.

Coatings or layers in PVD are used in sectors where increased durability, resistance to wear-and-tear and corrosion are required.

Higher resistance to wear... means the finish becomes ETERNAL!

BIOMEDICAL

Our technology is safe and has zero impact on the environment. There is no wastewater to dispose of, nor is there any production of smoke... it is a totally green and sustainable technology!

X-PLATING, with its X22 technology (PVD) integrated into the LEM INDUSTRIES Group, has consolidated a new performance index in the fashion and luxury markets.
